

Kruger Ci Prudential Fund

November 2021

KRUGER
International
Asset & Wealth Management

INVESTMENT OBJECTIVE

The investment objective of this fund is to provide investors with stable income and conservative capital growth with low volatility of returns over the short to medium term. The fund invests in a combination of equities, listed property, bonds and money market. The fund is aimed at investors who can tolerate low risk, as explained only by volatility, as it may have a maximum of only 40% exposure to equities. The fund may from time to time invest in listed and unlisted derivatives, in order to achieve the fund's investment objective. The fund adheres to the prudential investment guidelines set by Regulation 28.

Lowest return over 12 rolling months				-0.41%

FUND MANAGER'S COMMENTARY

International:

The upward momentum in global markets paused in November largely as a result of the FED'S change of mind on monetary policy. This happened against a background of surging inflation and increasing calls by some private economists that the Fed was behind the curve. From a sustained dovish position over the past 2 years, FED Chairman Powell – he was appointed for another four-year term – caught the markets somewhat off guard by tilting to a stricter monetary policy stance in his recent testimony before Congress and the Senate. He hinted that tapering – cutting back on the FED'S \$120 000 billion monthly bond buying program – will be brought forward and that rate hikes have finally reappeared on the FED'S radar screen. Incoming economic data remain solid, and analysts expect that the bumper third quarter corporate earnings will be sustained in 2022. Meanwhile, the robust debate about the stickiness of inflation and supply chain disruptions continued unabated – inflation is now running at an annualised 6.8% in the US and 4.9% in Europe. Unfortunately, Covid-19 has reclaimed the headlines amid the arrival and fast evolving new Omicron variant which, at the time of writing, had surfaced in 57 countries. It's early days but initial indications are that this variant appears to cause milder infections than the Delta variant but is far more transmissible – countries are already taking pre-emptory steps to curtail the spread but the full impact on the global economy and the markets must still play out. The slowing Chinese economy, President Biden's mounting political challenges and increasing geopolitical risks are adding to the headwinds. On the data front, US employment for November surprised on the downside as non-farm payrolls rose by just 210 000 jobs against an expected 550 000 but on deeper analysis it turned out to be a positive report. The employment data for the past two months was revised higher by a combined 82 000 while the unemployment rate improved sharply to 4.2% from 4.6% in October and 6.3% at the start of the year. The rise in hourly earnings came in at 4.8% against an expected 5.0% year on year but remain in an upward trajectory. With the fourth quarter reporting season only kicking off in mid-January, market direction will until then be at the mercy of economic data, Covid-19, and political developments. The jury remains out on the sustainability of the current lofty earnings, especially if the FED'S hand is forced to act more aggressively on monetary policy. Markets retreated across the board in November – the MSCI All Country Index by -3.99% (+11.99%ytd); the Dow Jones Industrial Index by -3.50% (+14.61%ytd); the S&P 500 by -0.69% (+23.18%ytd) and MSCI Emerging Markets Index by -3.04% (+8.91%ytd) – all in US dollars.

Local:

Recent economic data came in with a slightly firmer undertone, but the economy remains vulnerable due to the evolving new Covid-19 variant (Omicron), unresolved weaknesses such as erratic power supply and the government's inability to kickstart the economy and to make a dent in unemployment. The main driver behind the improving data remains the pent-up global commodity demand in the wake of the post Covid-19 re-opening of the global economy. This has led to solid spikes in volumes and prices but also increasing supply chain challenges with severe inflation implications. The prices of certain commodities have recently subsided, mainly on the back of the slowing Chinese economy and their initiatives to drive prices lower and the jury remains out on the sustainability of the broader commodity strength. With the local election out of the way and the ruling party stripped of absolute power, the shift towards coalition governance will soon be put to the test. Some of the data points that contributed to the slight tilt to a positive undertone in the latest economic data were the R19.8 billion trade surplus for October, a sustained +14.1% year on year increase in SARS tax collection for October and the Absa Manufacturing PMI that improved to 57.2 in November. Among the negative data points were formal employment for the third quarter that deteriorated further to 34.9% and 46.6% if the 545 000 people that stopped looking for jobs was included, the SACCI confidence index that dropped to 92.8 in November from 94.9 the previous month, retail sales that declined by -1.3% year on year in October from September's +5.1% and manufacturing production that fell by -5.9% month on month after growing by +3.0% in September compared to the expected growth of +0.5%. As expected, the Reserve Bank tightened monetary policy at its November meeting with a rate hike of 25 basis points. In contrast to global markets, the FTSE JSE All Share Index advanced by +4.47% (+23.30%ytd) in November, mainly due to the weaker Rand. All the Kruger Funds followed suit – the Equity Fund by +2.71% (+21.26%ytd); the Balanced Fund by +2.82% (+17.63%ytd); the Prudential Fund by +2.39% (+14.47%ytd) and the International Flexible Feeder Fund by +4.39% (+15.43%ytd).

DISCLOSURES

FAIS Disclosure

The annual fees include a fee of up to 0.70% payable to Kruger International, a fee of up to 0.15% (Class A) or 0.25% (Class G) payable to Ci Collective Investments, and a fee up to 0.40% payable to Analytics Consulting. All fees stated are exclusive of VAT. Please note that in most cases where the financial services provider (FSP) is a related party to the fund manager, the FSP/distributor may earn additional fees other than those charged by the fund manager. A FX fee of up to 0.05% (incl. VAT) on any FX transactions may be payable to Kruger International in addition to the annual fees referred to above. Kruger International is an indirect shareholder of Ci Collective Investments. Kruger International Mauritius (KIM) is the investment advisor on the International Equity Fund and International Flexible Fund. The fund may invest in the KIM funds. KIM and SIP may earn an annual investment advisory fee of up to 1.00% on all such investments. Kruger International does not charge an annual management fee on the value of investments that are placed in the KIM funds.

Characteristics

This is a multi-asset low equity fund which means that it may invest in a spectrum of equity, bond, property and money market and tends to display reduced short term volatility and aims for long term capital growth. The fund may have a maximum equity exposure of up to 40% and complies with the regulation governing retirement funds. This fund may invest up to 30% of the assets outside of South Africa plus an additional 10% of the assets in Africa excluding South Africa.

Risk Reward Profile: High

Typically, the lower the risk, the lower the potential return and the higher the risk, the higher the potential return. There is no guarantee that returns will be higher when investing in a fund with a higher risk profile. The risk profile for this fund is rated as low, as it may only invest up to 40% in equity securities, both locally and abroad. The risk refers only to volatility.

RISK DEFINITIONS

Market Risk

Equity markets are volatile and the price of equities fluctuate based on a number of factors such as changes in the economic climate, general movements in interest rates and the political and social environment which will also affect the value of the securities held in the unit trust, thereby affecting the overall value of the unit trust.

Currency Risk / Foreign Exchange Risk

This risk is associated with investments that are denominated in foreign currencies. When the foreign currencies fluctuate against the South African Rand, the investments face currency gains or losses.

Concentration Risk

Unit Trusts pool the assets of many investors and use the proceeds to buy a portfolio of securities. There are regulations in place which limit the amount that a unit trust may invest in securities, thereby spreading the risk across securities, asset classes and companies.

Liquidity Risk

This relates to the ability of the unit trust to trade out of a security held in the fund at or near to its fair value. This may impact on liquidity and in the case of foreign securities, the repatriation of funds.

Credit Risk

Credit risk arises where an issuer of a non-equity security or a swap is unable to make interest payments or repay capital, which could result in losses to the fund.

Total Return Swaps Risk

The fund may invest in total return swaps. Total return swaps are unlisted instruments issued by a bank to provide the return of a specific index. The value of the instrument is directly linked to the performance of the underlying equities in the index and will fluctuate in line with daily market movements. Some of the equity exposure in the fund could be derived through total return swaps instead of physically holding the underlying equities.

Inflation Risk

The risk of potential loss in the purchasing power of your investment due to a general increase of consumer prices.

Political Risk

The risk that investment returns could suffer as a result of a country's political changes or instability in the country. Instability could come from changes in the country's government, policy makers or military.

Tax Risk

This risk relates to any change to tax laws or to the interpretation of existing tax laws which has an impact on the manner in which unit trusts are taxed.

Compliance Risk

This refers to the risk of not complying with the legislation, regulations, prescribed investment limits and internal policies and procedures by the manager or the fund manager.

This document is not intended to address the personal circumstances of any Financial Services Provider's (FSP's) client nor is it a risk analysis or examination of any client's financial needs. Collective Investment Schemes in Securities ("CIS") are generally medium to long term investments. The value of participatory interests may go down as well as up and past performance is not necessarily a guide to future performance. CIS are traded at ruling prices and can engage in borrowing and scrip lending. Different classes of units apply to this fund and are subject to different fees and charges. A schedule of fees and charges is available on request from Ci. Ci does not provide any guarantee either with respect to the capital or the return of the fund. Forward pricing is used. Fluctuations or movements in exchange rates may cause the value of underlying international investments to go up or down. International Investments may include additional risks such as potential constraints on liquidity and repatriation of funds, macroeconomic risk, political risk, foreign exchange risk, tax risk, settlement risk as well as potential limitations on the availability of market information. The fund may be closed from time to time in order to manage it more efficiently in accordance with its mandate. The Kruger funds are funds established and administered by Ci, and Kruger has been appointed to manage and market the funds. Kruger is an indirect shareholder of Ci. As an indirect shareholder, Kruger may earn dividends from time to time and participation in any dividends may be linked to the revenue generated by Ci from the Kruger funds, and from any other Ci funds. Ci retains full legal responsibility for this co-named fund. Additional information on the fund may be obtained, free of charge, directly from Ci. Ci is a Non-Voting (ordinary) Member of the Association for Savings & Investment SA (ASISA).

Total Expense Ratio (TER): The above TER % has been annualised and indicates the percentage of the value of the fund which was incurred as expenses relating to the administration of the fund over the rolling 3 year period or since fund inception, on an annualised basis. A higher TER does not necessarily imply a poor return, nor does a low TER imply a good return. The current TER's cannot be regarded as an indication of future TER's. **Transaction Cost (TC):** The above TC % has been annualised and indicates the percentage of the value of the fund which was incurred as costs relating to the buying and selling of the assets underlying the fund. Transaction Costs are a necessary cost in administering the fund and impacts fund returns. It should not be considered in isolation as returns may be impacted by many other factors over time including market returns, the type of fund, investment decisions of the investment manager and the TER. Total Investment Charge is the TER plus TC which indicates the percentage of the value of the fund which was incurred as costs relating to the investment of the fund. The TER and Transaction Costs cannot be determined accurately because of the short life span of the Financial Product. Calculations are based on actual data where possible and best estimates where actual data is not available. Calculations are based on actual data where possible and best estimates where actual data is not available. Performance quoted is for lump sum investment with income distributions, prior to deduction of applicable taxes, included. NAV to NAV figures have been used. The annualised return is the return of the performance period re-scaled to a period of one year. Performance is calculated for the fund and individual investor performance may differ as a result of initial fees, actual investment date, date of reinvestment and dividend withholding tax.
